SUMMARY

Data professional with hands-on experience building ETL pipelines, SQL-driven dashboards, and self-service analytics using Python and Power BI. Strong focus on KPI tracking, data quality, and stakeholder management – translating business requirements into reliable, data-driven insights that support operational decision-making.

EXPERIENCE

AI Engineer · **My EdMaster**

Apr 2026 – Present

- Defining product scope and user requirements for an AI-powered legal assistant that surfaces similar case precedents, helping non-legal users make informed decisions without replacing formal legal counsel.

Data & Analytics Engineer · **American Witness** | Washington DC

Aug 2025 – Mar 2026

- Gathered stakeholder requirements and translated them into spatial analytics dashboards and interactive heatmaps, enabling editorial teams to monitor crime trends and support data-driven reporting decisions.
- Identified workflow inefficiencies and implemented AI-powered automation for document summarization and natural language querying, reducing research turnaround time by over 80% and minimizing ad hoc data requests.
- Defined data validation requirements and partnered with engineering to maintain ingestion pipelines, ensuring consistent and reliable reporting outputs for business stakeholders.

Data Analyst · **Alstom** | Los Angeles, CA

May 2024 – Aug 2024

- Conducted stakeholder interviews to elicit reporting requirements; designed and delivered Power BI dashboards tracking daily work orders, project KPIs, and budgets – the first centralized reporting tool used across management and engineering teams.
- Documented and standardized recurring reporting workflows; automated manual Excel consolidation processes using Python and VBScript, cutting reporting cycle time by 50%.
- Partnered with cross-functional engineering teams to define KPIs, document business processes, and establish standardized reporting views that improved transparency in team meetings.

Software Engineer · **Tata Consultancy Services** | India

2020–2023

- Collaborated with business users and data governance teams to gather requirements, identify reporting gaps, and implement SQL and Power BI enhancements that improved data accuracy and reduced manual preparation time.
- Supported enterprise MDM systems ensuring reliable batch workflow execution across customer and product data domains.
- Investigated data discrepancies using SQL and coordinated with cross-functional teams to resolve issues and maintain reporting integrity.

PROJECTS

AI-Powered Smartphone Optimization

- Conducted analysis of survey data from 1,000+ users using Python and SQL to identify behavioral patterns, delivering insights that informed product feature prioritization and user engagement strategy.

Cancer Drug Sensitivity Prediction

- Applied data preprocessing and dimensionality reduction (PCA) on complex datasets to extract actionable signals, demonstrating analytical problem-solving across domains.

SKILLS

Business Analysis: Requirements Gathering, Stakeholder Management, Process Documentation, KPI Definition

Reporting & Visualization: Power BI, Tableau, Excel (Pivot Tables, Power Query)

Querying & Scripting: SQL, Python

Tools: Jira, Git, Informatica MDM, DB2

Databases: MySQL, DB2, AWS

EDUCATION

MS Computer Science | George Washington University | GPA: 3.6 | 2023–2025

Coursework: Machine Learning, Data Analytics, System Architecture, Software Engineering
